WHAT IS AGILE

Ron Fybish

Lets say you went to a Restaurant

After going through the Menu you made your decision and gave your order

Ron Fybish

The waiter gets your order to the kitchen where the chefs prepare all your food and send it to you once everything is done , **all at once**

Developer Tips

Ron Fybish

You will get your entire order when everything is done

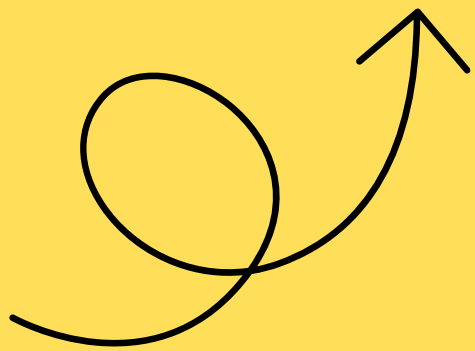
But what if you want to change your order in between or add something to it

Ron Fybish

This would be frustrating, isn't it?

This is true in Software development process too

Developing take months or years a Software



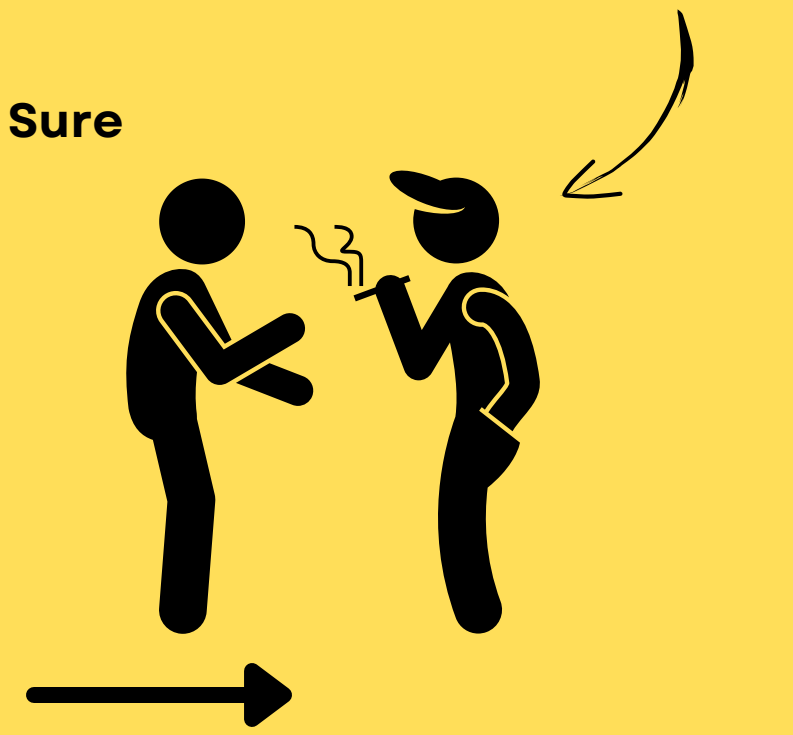
Ron Fybish

And its hard to determine the entire features in this high demanding world

Initially

I need an App that can get Tiktok videos and tweets in one place

Sure



1 Year Later

Can you add a feature to get Instagram reels and too

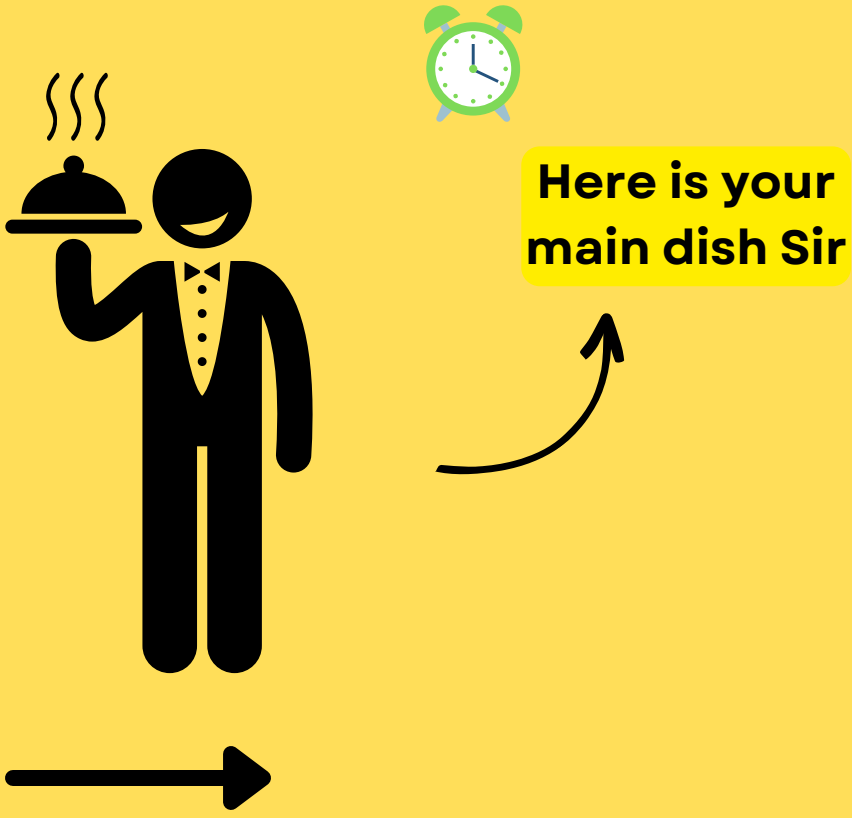
your app is done

But what if things happend this way

You went to the Restaurant and gave your order

Instead of preparing and presenting in one go, you were provided first with Starters, followed by the main course and finally dessert one by one

do you like this?



Developer Tips
